EXPANSION KIT

QTY

- LED Strips 2
- Extension Wires 2
- Set of Zip Ties 1

TOOLS NEEDED

- FLUSH CUTTERS
- ALCOHOL PREP PADS
- WIRE CUTTERS
- WIRE STRIPPERS
- CRIMPERS

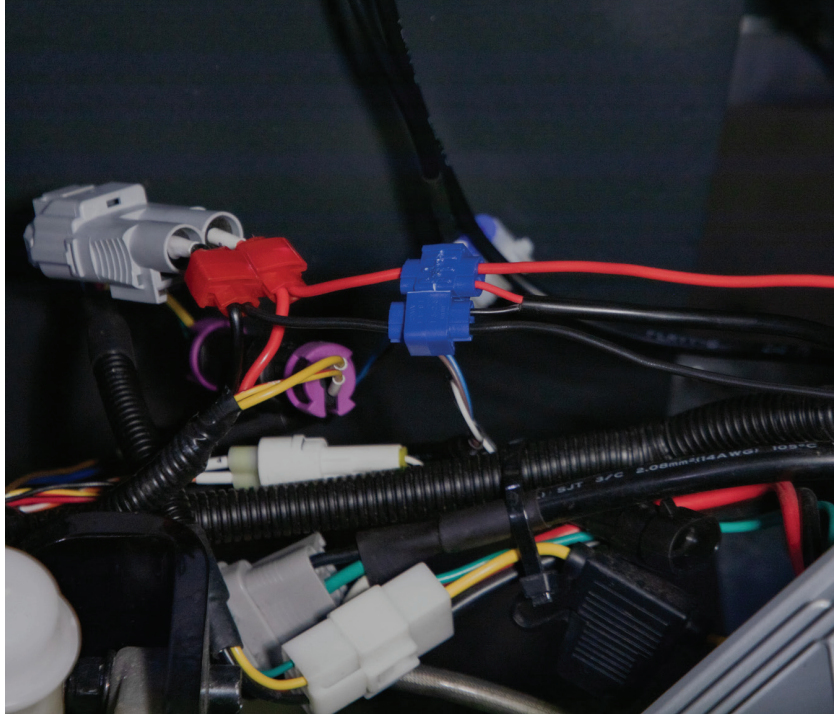

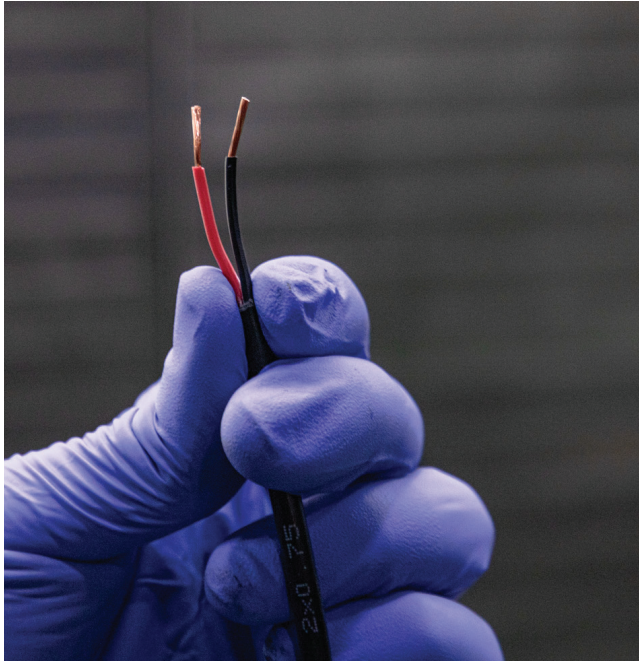

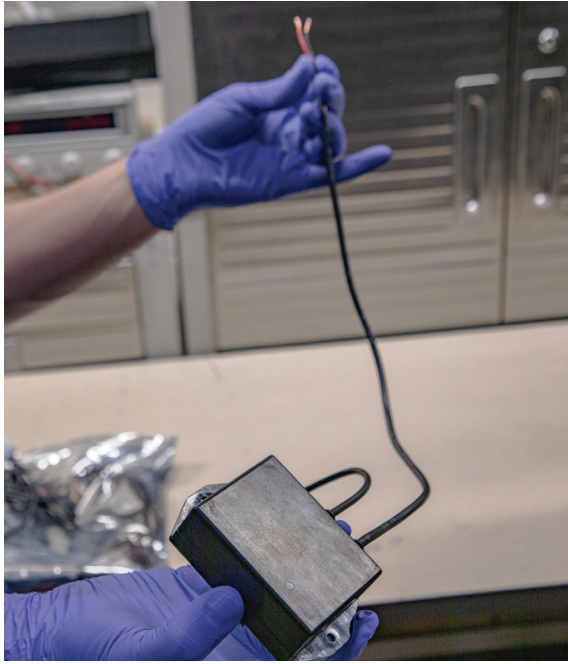

STEP 1:

Lift your cart and ensure it's stable for your safety.

STEP 2:

Connect the LUX module to a 12-volt power source, and match the colors: connect red to 12V+ and Black to 12V-.

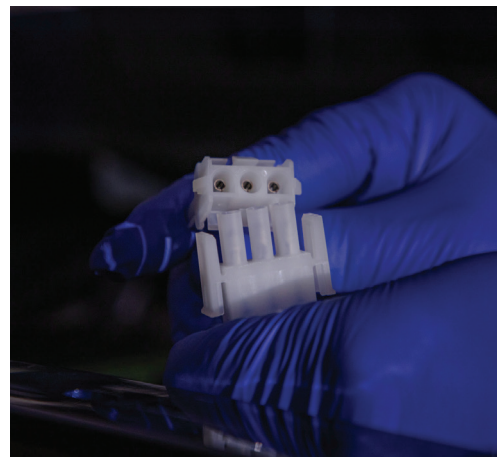

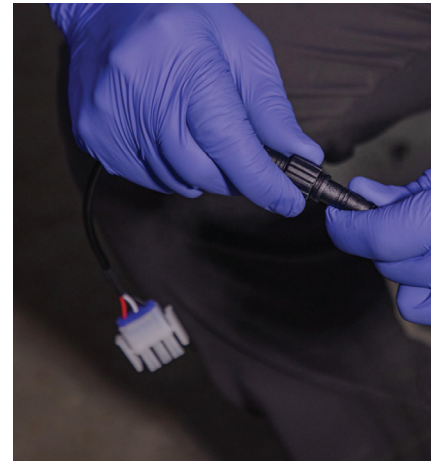

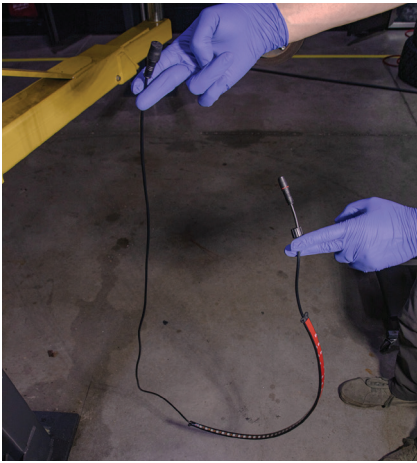

STEP 3:

Secure the Lux module to the front wall of the battery compartment using double-sided tape or any method that works best for you.

STEP 4:

Connect the first LED strips to the Lux module using a jumper in between. Align the arrows on the smaller connectors, and ensure the jumper is securely fastened with the cap.

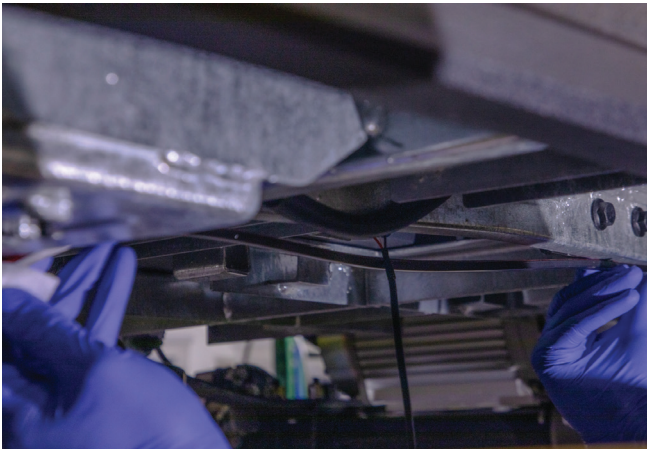

STEP 5:

Select the locations for the strips under your cart, and clean the surfaces thoroughly to ensure the adhesive will hold properly.

STEP 6:

Peel the adhesive backing from the LED strip and firmly press onto the selected surface, starting at one end of the strip and proceeding to the other.

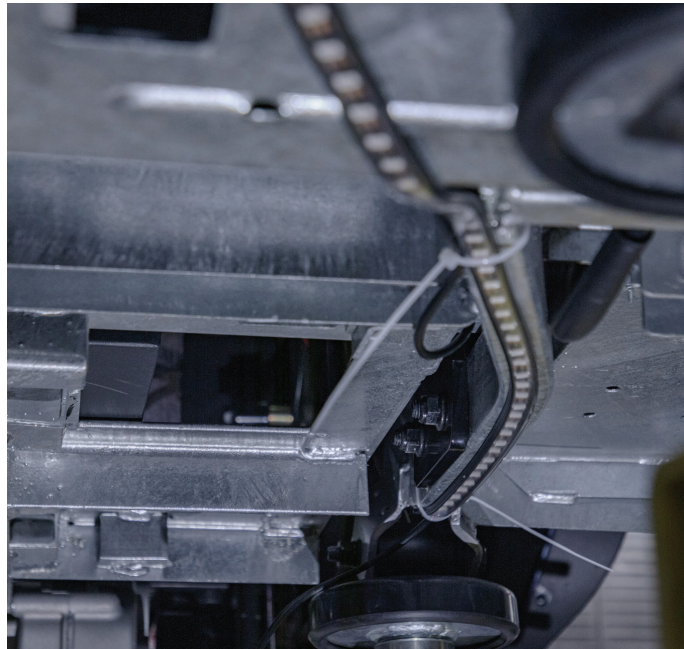

STEP 7:

Repeat Step 6 for the remaining LED strip(s), connecting them to each other using the included extensions.

STEP 8:

Secure the strips with zip ties for extra security.

STEP 9:

Carefully double check that all wires are routed securely with zip ties so they do not hang below the cart, preventing anything from getting caught or snagged while driving.
